

# International Productivity Monitor

The *International Productivity Monitor* is published by the Centre for the Study of Living Standards (CSLS) to support policy analysis and development in the productivity area. The objective of the *Monitor* is to focus attention on the importance of productivity for improving living standards and quality of life. The *Monitor* publishes high-quality articles on productivity issues, trends and developments in Canada and other countries and serves as a vehicle for the international discussion of productivity topics. Print and on-line versions are published twice a year. The articles are largely non-technical in nature and understandable to a wide audience of productivity researchers and analysts as well as the general public. The publication is distributed electronically to anyone interested in productivity issues on a complimentary basis. While most articles are invited, submissions will be considered.
